

Setup your laptops –Go to Handouts

For Stokes, follow the links in "Connecting_to_Stokes"

You can follow Installations_anaconda_GitHub.pdf to get Anaconda and GitHub

- if you have less space, install Miniconda following the alternative_instructions_miniconda/
- 🌟 If you are an astro person you can install Astroconda, but note it does use older versions of some packages (see lecture next week about dependencies and environments)

🧙 You can also already install astropy
<https://docs.astropy.org/en/latest/install.html>

🧙 And you might want to get pandas too
<https://anaconda.org/anaconda/pandas>
